Proc. of SPIE Vol. 9469 946901-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

- v *Authors*
- vii *Conference Committee*
- ix *Introduction*

SESSION 1 SPACE PAYLOAD TECHNOLOGIES

- 9469 02 **Correction of active space telescope mirror using woofer-tweeter adaptive optics [9469-1]**
- 9469 04 **Characterizing point spread function (PSF) fluctuations to improve resident space object detection (RSO) [9469-3]**
- 9469 05 **High-resolution infrared detector and its electronic unit for space application [9469-4]**
- 9469 06 **Anomalous cases of astronaut helmet detection [9469-5]**
- 9469 07 **A Resilient Program Technical Baseline Framework for future space systems (Invited Paper) [9469-6]**

SESSION 2 CYBER PHYSICAL SYSTEM

- 9469 08 **Towards an integrated defense system for cyber security situation awareness experiment [9469-7]**
- 9469 09 **Secured network sensor-based defense system [9469-8]**

SESSION 3 PROTECTED SATCOM AND SATOP

- 9469 0A **Game theoretic power allocation and waveform selection for satellite communications [9469-9]**
- 9469 0B **Multi-entity Bayesian network for the handling of uncertainties in SATCOM links [9469-27]**
- 9469 0C **Multi-carrier transmission for hybrid radio frequency with optical wireless communications [9469-11]**
- 9469 0D **RFI modeling and prediction approach for SATOPS applications [9469-12]**
- 9469 0E **A TDMA MIMO SAR radar for automated position-keeping [9469-13]**

SESSION 4 POSITIONING, NAVIGATION, AND TRACKING

- 9469 0F **A benchmark for vehicle detection on wide area motion imagery [9469-14]**

9469 OG **Multi-target detection and estimation with the use of massive independent, identical sensors** [9469-15]

9469 OH **A suborbital IMU test mission** [9469-16]

SESSION 5 SPACE SITUATIONAL AWARENESS

9469 OI **Review of game theory applications for situation awareness** [9469-17]

9469 OJ **Pursuit-evasion games with information uncertainties for elusive orbital maneuver and space object tracking** [9469-18]

9469 OK **Distributed sensor management for space situational awareness via a negotiation game** [9469-19]

9469 OL **Distribution of debris as measured by the NASA-WISE instrument** [9469-20]

9469 OM **Enabling direct feedback between initial orbit determination and sensor data processing for detection and tracking of space objects** [9469-21]

9469 ON **Space situational awareness applications for radio astronomy assets** [9469-22]

SESSION 6 PROCESSING AND EXPLOITATION

9469 OP **Economic analysis of open space box model utilization in spacecraft** [9469-24]

9469 OR **The Thermal Infrared Compact Imaging Spectrometer (TIRCIS): a follow-on to the Space Ultra Compact Hyperspectral Imager (SUCHI)** [9469-26]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Nils R. Sandell Jr., Strategic Technology Office, DARPA
(United States)

Symposium Co-chair

David A. Logan, BAE Systems (United States)

Conference Chairs

Khanh D. Pham, Air Force Research Laboratory (United States)
Genshe Chen, Intelligent Fusion Technology, Inc. (United States)

Conference Program Committee

Joseph L. Cox, Missile Defense Agency (United States)
Erik P. Blasch, Air Force Research Laboratory (United States)
Trevor J. Bihl, Air Force Institute of Technology (United States)
Brien Flewelling, Air Force Research Laboratory (United States)
Thomas George, ChromoLogic (United States)
Richard T. Howard, NASA Marshall Space Flight Center (United States)
Brian K. McComas, Raytheon Missile Systems (United States)
Jeremy Murray-Krezan, Air Force Research Laboratory (United States)
Tien M. Nguyen, The Aerospace Corporation (United States)
Andre Samberg, Sec-Control Finland Ltd. (Finland)
Robert SiVilli, Air Force Research Laboratory (United States)
Ryan M. Weisman, Air Force Research Laboratory (United States)
Henry Zmuda, University of Florida (United States)

Session Chairs

- 1 Space Payload Technologies
Brien R. Flewelling, Air Force Research Laboratory (United States)
Joseph L. Cox, Missile Defense Agency (United States)
- 2 Cyber Physical System
Richard T. Howard, NASA Marshall Space Flight Center (United States)
Wei Yu, Towson University (United States)
- 3 Protected SATCOM and SatOP
Zhonghai Wang, Intelligent Fusion Technology, Inc. (United States)
Xi Zhang, Texas A&M University (United States)

- 4 Positioning, Navigation, and Tracking
Trevor J. Bihl, Air Force Institute of Technology (United States)
Bin Jia, Intelligent Fusion Technology, Inc. (United States)
- 5 Space Situational Awareness
Erik Blasch, Air Force Research Laboratory (United States)
Dan Shen, Intelligent Fusion Technology, Inc. (United States)
- 6 Processing and Exploitation
Jeremy Murray-Krezan, Air Force Research Laboratory (United States)
Ryan M. Weisman, Air Force Research Laboratory (United States)

Introduction

Over the years, the conference on Sensors and Systems for Space Applications has held seven technical meetings. As we reflect back on another successful consecutive offering in science and technology in and from space, several things stand out. Of course, Modular-Open-System Architecture principles and Better Buying Power 3.0 Initiatives—as featured in the invited talk by Dr. Tien Nguyen from The Aerospace Corporation—were quite interesting, and their impact on space enterprise and DoD resilient program acquisition strategies are just beginning. Additionally, a greater understanding of radio interference sources, the impact of radio interference on civil and military communication systems, and cyberization of space systems all occupied significant amounts of our time for paper solicitation. Regarding timely reporting of emerging capabilities for sensors and space systems, we decided to focus on some application areas where advanced science and technologies are making an impact. In particular, the session titles are adaptively categorized each year to represent the changing contents driven by the goal of providing the dual-use civil-military sensors and systems that can be relied upon in congested and contested environments. This year, the technical presentations have been grouped into the following sessions:

- Space Payload Technologies
- Cyber Physical Systems
- Protected Satellite Communications
- Positioning, Navigation, and Tracking
- Space Situational Awareness
- Processing and Exploitation

We are pleased to acknowledge the authors that chose this avenue for the publication of their technical contributions, which have resulted in high-quality work in the SPIE database. We also would like to take this opportunity to thank the members of our program committee and the session chairs for their tireless support to make this conference another success despite continued budget cuts and government travel restrictions. Thanks are also due to the SPIE staff for their invaluable help in making this all possible.

As the conference chairs, we speak for the conference's program committee in saying that we really do need new members and volunteers, and we sincerely want to hear what you have to say. This includes getting help and hearing from you regarding technical (and other) matters, ranging from the way this conference is run to the presentations in this proceeding volume. The program committee and volunteers have gotten us this far and continue to allow us to move forward as a whole.

Lastly, looking ahead to 2016, we wish success to our new committee members for next year. And to you, our readers, many thanks for your continued interest. What more could a conference chair want?

Khanh D. Pham
