**Paper Numbering:** Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

## Introduction

All papers included in this volume are selected from the 16th International Conference on Geoinformatics and the Joint Conference on GIS and Built Environment organized by Sun Yat-sen University and the University of Cincinnati and held 28–29 June 2008 in Guangzhou, China. The Geoinformatics conference series was initiated by the International Association of Chinese Professionals in Geographic Information Sciences (CPGIS) in 1992. The Joint Conference on GIS and Built Environment is a new conference series initiated by Sun Yat-sen University and the University of Cincinnati.

The central theme of the combined conference is GIS, Built Environment, and Geo-simulation. The main topics included geo-simulation and virtual GIS environments, the built environment and its dynamics, the monitoring and assessment of natural resources and environments, advanced spatial data models and analyses, and classification of remote sensing images.

This combined conference provided a unique forum for exchanging ideas and knowledge on geo-information sciences between GIS professionals worldwide. This year's Geoinformatics conference is the largest ever. Over 800 participants came from 15 countries and regions, including the United States, the United Kingdom, Canada, Germany, Australia, South Africa, Turkey, Singapore, Malaysia, Thailand, United Arab Emirates, Mainland China, Hong Kong, Macau, and Taiwan. The organizers received more than 900 abstracts, and nearly 600 full papers. The conference program consists of 212 oral presentations and over 300 posters.

All papers in this volume are selected through a rigorous peer-review process. We believe that you will find these papers useful.

Finally, we would like to thank all authors and reviewers for their contributions to this volume.
