**Volume 12033**

Part One of Two Parts

Proceedings of SPIE, 1605-7422, V. 12033

Medical Imaging 2022: Computer-Aided Diagnosis, edited by Karen Drukker, Khan M. Iftekharuddin,
Proc. of SPIE Vol. 12033, 1203301 · © 2022 SPIE · 1605-7422 · doi: 10.1117/12.2638244

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Medical Imaging 2022: Computer-Aided Diagnosis*, edited by Karen Drukker, Khan M. Iftekharuddin, Proc. of SPIE 12033, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

xiii *Conference Committee*

## Part One

**NOVEL APPLICATIONS**

12033 02 **A feasibility study of computer-aided diagnosis with DECT Bayesian reconstruction for polyp classification** [12033-16]

12033 03 **Early detection of oesophageal cancer through colour contrast enhancement for data augmentation** [12033-17]

12033 04 **Real-time esophagus achalasia detection method for esophagoscopy assistance** [12033-18]

**COVID-19**

12033 05 **Virtual vs. reality: external validation of COVID-19 classifiers using XCAT phantoms for chest computed tomography** [12033-9]

12033 06 **Detecting COVID-19 from respiratory sound recordings with transformers** [12033-10]

12033 07 **Clinical outcome prediction in COVID-19 using self-supervised vision transformer representations** [12033-12]

12033 08 **Multi-stage investigation of deep neural networks for COVID-19 B-line feature detection in simulated and in vivo ultrasound images** [12033-13]

12033 09 **Automated classification method of COVID-19 cases from chest CT volumes using 2D and 3D hybrid CNN for anisotropic volumes** [12033-14]

12033 0A **Multiparameter analysis of vascular remodeling in post-acute sequelae of COVID-19** [12033-15]

**BREAST I**

12033 0B **Analyzing GAN artifacts for simulating mammograms: application towards finding mammographically-occult cancer** [12033-1]

12033 0C **Deep curriculum learning in task space for multi-class based mammography diagnosis** [12033-2]

12033 0D **Improving lesion detection algorithm in digital breast tomosynthesis leveraging ensemble cross-validation models with multi-depth levels** [12033-3]

12033 0E **Improving the performance of computer-aided classification of breast lesions using a new feature fusion method** [12033-4]

12033 0F **Early prediction of metastasis in women with locally advanced breast cancer** [12033-5]

## DEEP LEARNING I

12033 0H **Deep hybrid convolutional wavelet networks: application to predicting response to chemoradiation in rectal cancers via MRI** [12033-19]

12033 0J **Open-world active learning for echocardiography view classification** [12033-20]

12033 0K **Applying a novel two-stage deep-learning model to improve accuracy in detecting retinal fundus images** [12033-21]

12033 0L **Deciphering deep ensembles for lung nodule analysis** [12033-22]

12033 0M **Stroke lesion localization in 3D MRI datasets with deep reinforcement learning** [12033-23]

12033 0N **Segmentation of multiple myeloma plasma cells in microscopy images with noisy labels** [12033-24]

12033 0G **Effect of computerized decision support on diagnostic accuracy and intra-observer variability in multi-institutional observer performance study for bladder cancer treatment response assessment in CT urography** [12033-6]

12033 0I **Ensembling mitigates scanner effects in deep learning medical image segmentation with deep-U-Nets** [12033-7]

## DETECTION

12033 0O **Exploring directed network connectivity in complex systems using large-scale augmented Granger causality (lsAGC)** [12033-30]

12033 0P **Integrating zonal priors and pathomic MRI biomarkers for improved aggressive prostate cancer detection on MRI** [12033-31]

12033 0Q **Renal tumor analysis using multi-phase abdominal CT images** [12033-32]

12033 0R **Deep learning based multiple sclerosis lesion detection utilizing synthetic data generation and soft attention mechanism** [12033-33]

**BREAST II**

12033 0S **Association between DCE MRI background parenchymal enhancement and mammographic texture features** [12033-25]

12033 0T **Effect of different molecular subtype reference standards in AI training: implications for DCE-MRI radiomics of breast cancers** [12033-26]

12033 0U **Mammary duct detection using self-supervised encoders** [12033-27]

12033 0V **WRDet: a breast cancer detector for full-field digital mammograms** [12033-28]

12033 0W **Computer-aided detection for architectural distortion: a comparison of digital breast tomosynthesis and digital mammography** [12033-29]

**DEEP LEARNING II**

12033 0X **Addressing imaging accessibility by cross-modality transfer learning** [12033-39]

12033 0Y **Incorporate radiograph-reading behavior and knowledge into deep reinforcement learning for lesion localization** [12033-40]

12033 0Z **Evaluating the sensitivity of deep learning to inter-reader variations in lesion delineations on bi-parametric MRI in identifying clinically significant prostate cancer** [12033-41]

12033 10 **Categorization of tumor-derived cells from lung cancer with compact deep learning** [12033-42]

12033 11 **Bayesian uncertainty estimation for detection of long-tail and unseen conditions in abdominal images** [12033-43]

12033 12 **DG-GRU: dynamic graph based gated recurrent unit for age and gender prediction using brain imaging** [12033-44]

**NEUROLOGY**

12033 13 **Effects of feature type and multiple scanners on brain metastasis stereotactic radiosurgery outcome prediction** [12033-34]

12033 14 **Unsupervised anomaly detection in 3D brain MRI using deep learning with multi-task brain age prediction** [12033-35]

12033 15 **A fully convolutional neural network for explainable classification of attention deficit hyperactivity disorder** [12033-36]

12033 16 **PET image harmonization using smoothing-CycleGAN** [12033-37]

12033 17 **Lesion-preserving unpaired image-to-image translation between MRI and CT from ischemic stroke patients** [12033-38]

## HEAD AND NECK, MUSCULOSKELETAL

12033 18 **A CT-based radiomics model for predicting feeding tube insertion in oropharyngeal cancer** [12033-45]

12033 19 **A deep network ensemble for segmentation of cervical spinal cord and neural foramina** [12033-46]

12033 1A **BAPGAN: GAN-based bone age progression of femur and phalange x-ray images** [12033-47]

12033 1B **A novel CNN+LSTM approach to classify frontal chest x-rays for spine fractures** [12033-48]

12033 1C **Efficient endoscopic frame informativeness assessment by reusing the encoder of the primary CAD task** [12033-49]

## RADIOMICS, RADIOGENOMICS, MULTI-OMICS

12033 1D **Multi-modal learning with missing data for cancer diagnosis using histopathological and genomic data** [12033-50]

12033 1E **Uncertainty estimation in classification of MGMT using radiogenomics for glioblastoma patients** [12033-51]

12033 1F **Iterative ComBat methods for harmonization of radiomic features** [12033-52]

12033 1G **4D radiomics in dynamic contrast-enhanced MRI: prediction of pathological complete response and systemic recurrence in triple-negative breast cancer** [12033-54]

12033 1H **Visualization and unsupervised clustering of emphysema progression using t-SNE analysis of longitudinal CT images and SNPs** [12033-55]

## POSTER SESSION

12033 1I **Placenta accreta spectrum and hysterectomy prediction using MRI radiomic features** [12033-53]

12033 1J **Multi-class prediction for improving intestine segmentation on non-fecal-tagged CT volume** [12033-78]

12033 1K **Identifying an optimal machine learning generated image marker to predict survival of gastric cancer patients** [12033-79]

12033 1L **Prediction of CD3 T-cell infiltration status in colorectal liver metastases: a radiomics-based imaging biomarker** [12033-80]

12033 1M **Improving prostate cancer triage with GAN-based synthetically generated prostate ADC MRI** [12033-81]

12033 1N **One class to rule them all: detection and classification of prostate tumors presence in bi-parametric MRI based on auto-encoders** [12033-82]

12033 1O **Hepatic artery segmentation with 3D convolutional neural networks** [12033-83]

12033 1P **Colorectal polyp classification using confidence-calibrated convolutional neural networks** [12033-84]

12033 1Q **Fully automated longitudinal tracking and in-depth analysis of the entire tumor burden: unlocking the complexity** [12033-86]

12033 1R **Learning to triage by learning to reconstruct: a generative self-supervised approach for prostate cancer based on axial T2w MRI** [12033-87]

12033 1S **Intrinsic subtype classification of breast lesions on mammograms by contrastive learning** [12033-88]

**PART TWO**

12033 1T **Machine learning algorithm for classification of breast ultrasound images** [12033-89]

12033 1U **DBNet: a dual-branch network for breast cancer classification in ultrasound images** [12033-90]

12033 1V **Deep-learning characterization and quantification of COVID-19 pneumonia lesions from chest CT images** [12033-91]

12033 1W **Hybrid transformer for lesion segmentation on adaptive optics retinal images** [12033-92]

12033 1X **Annotation and segmentation of diabetic retinopathy lesions: an explainable AI application** [12033-93]

12033 1Y **Human-in-the-loop deep learning retinal image classification with customized loss function** [12033-94]

12033 20 **Blood vessel segmentation in en-face OCTA images: a frequency based method** [12033-96]

12033 21 **Deep learning-based longitudinal CT registration for anatomy variation assessment during radiotherapy** [12033-97]

12033 22 **Detecting aggressive papillary thyroid carcinoma using hyperspectral imaging and radiomic features** [12033-98]

12033 23 **Linked psychopathology-specific factors and individual structural brain abnormalities in schizophrenia** [12033-99]

12033 24 **Fusion of clinical phenotypic and multi-modal MRI for acute bilirubin encephalopathy classification** [12033-100]

12033 25 **Segmentation of aorta and main pulmonary artery of non-contrast CT images using U-Net for chronic thromboembolic pulmonary hypertension: evaluation of robustness to contacts with blood vessels** [12033-101]

12033 26 **Similarity-based uncertainty scores for computer-aided diagnosis** [12033-102]

12033 27 **A deep learning approach for COVID-19 screening and localization on chest x-ray images** [12033-103]

12033 28 **A comparison of feature selection methods for the development of a prognostic radiogenomic biomarker in non-small cell lung cancer patients** [12033-104]

12033 29 **Fusion of multiple deep convolutional neural networks (DCNNs) for improved segmentation of lung nodules in CT images** [12033-105]

12033 2A **Avalanche decision schemes to improve pediatric rib fracture detection** [12033-107]

12033 2B **Identifying sinus invasion in meningioma patients before surgery with deep learning** [12033-108]

12033 2C **Interpretable learning approaches in structural MRI: 3D-ResNet fused attention for autism spectrum disorder classification** [12033-109]

12033 2D **Deep learning with vessel surface meshes for intracranial aneurysm detection** [12033-110]

12033 2E **A study on 3D classical versus GAN-based augmentation for MRI brain image to predict the diagnosis of dementia with Lewy bodies and Alzheimer's disease in a European multi-center study** [12033-111]

12033 2F **Image transformers for classifying acute lymphoblastic leukemia** [12033-112]

12033 2G **Deep ensemble models with multiscale lung-focused patches for pneumonia classification on chest x-ray** [12033-113]

12033 2H **Prediction of TNM stage in head and neck cancer using hybrid machine learning systems and radiomics features** [12033-114]

12033 2I **Radiomic texture feature descriptor to distinguish recurrent brain tumor from radiation necrosis using multimodal MRI** [12033-115]

12033 2J **Co-occurring diseases heavily influence the performance of weakly supervised learning models for classification of chest CT** [12033-116]

12033 2K **Spotlight scheme: enhancing medical image classification with lesion location information** [12033-117]

12033 2L **A vector representation of local image contrast patterns for lesion classification** [12033-118]

12033 2M **Fusion of handcrafted and deep transfer learning features to improve performance of breast lesion classification** [12033-119]

12033 2N **Cardiovascular disease and all-cause mortality risk prediction from abdominal CT using deep learning** [12033-120]

12033 2O **Neurovascular bundles segmentation on MRI via hierarchical object activation network** [12033-121]

12033 2P **Evaluation of the impact of physical adversarial attacks on deep learning models for classifying covid cases** [12033-122]

12033 2Q **Contrastive learning meets transfer learning: a case study in medical image analysis** [12033-123]

12033 2R **Automated segmentation of pediatric brain tumors based on multi-parametric MRI and deep learning** [12033-124]

12033 2S **Automatic polyp detection using SmartEndo-Net based on fusion feature pyramid network with mix-up edges** [12033-125]

12033 2T **Early prediction of the Alzheimer's disease risk using Tau-PET and machine learning** [12033-126]

12033 2U **AI-human interactive pipeline with feedback to accelerate medical image annotation** [12033-127]

12033 2V **High-resolution MR imaging using self-supervised parallel network** [12033-128]

12033 2W **Drug response prediction using deep neural network trained by adaptive resampling of histopathological images** [12033-129]

12033 2X **Predicting hematoma expansion after spontaneous intracranial hemorrhage through a radiomics based model** [12033-130]

12033 2Y **A radiomics approach to distinguish non-contrast enhancing tumor from vasogenic edema on multi-parametric pre-treatment MRI scans for glioblastoma tumors** [12033-131]

12033 2Z **Normalization of MRI signal intensity in polycystic kidney disease and the effect on radiomic features** [12033-132]

12033 30 **Multi-modality classification between myxofibrosarcoma and myxoma using radiomics and machine learning models** [12033-133]

12033 31 **Automated kidney segmentation by mask R-CNN in T2-weighted magnetic resonance imaging** [12033-134]

12033 32 **Multi-institutional evaluation of a deep learning model for fully automated detection of aortic aneurysms in contrast and non-contrast CT** [12033-135]

12033 33 **Multi-channel medical image segmentation method in Hessian domain** [12033-136]

12033 34 **Performance evaluation of lightweight convolutional neural networks on retinal lesion segmentation** [12033-137]

12033 35 **CNN-based tumor progression prediction after thermal ablation with CT imaging** [12033-138]

## LUNG

12033 36 **Resampling and harmonization for mitigation of heterogeneity in imaging parameters: a comparative study** [12033-56]

12033 37 **Optimization of imaging parameters of an investigational photon-counting CT prototype for lung lesion radiomics** [12033-58]

12033 38 **Prediction of lung CT scores of systemic sclerosis by cascaded regression neural networks** [12033-59]

12033 39 **Can deep learning model undergo the same process as a human radiologist when determining malignancy of pulmonary nodules?** [12033-60]

## ABDOMEN

12033 3A **A graph-theoretic algorithm for small bowel path tracking in CT scans** [12033-61]

12033 3B **Lymph node detection in T2 MRI with transformers** [12033-62]

12033 3C **CT radiomics to predict early hepatic recurrence after resection for intrahepatic cholangiocarcinoma** [12033-63]

12033 3D **Universal lesion detection in CT scans using neural network ensembles** [12033-64]

12033 3E **Unsupervised optical small bowel ischemia detection in a preclinical model using convolutional variational autoencoders** [12033-65]

12033 3F **Self-supervised U-Net for segmenting flat and sessile polyps** [12033-66]

## EYE, RETINA

12033 3G **Automation of ischemic myocardial scar detection in cardiac magnetic resonance imaging of the left ventricle using machine learning** [12033-67]

12033 3H **Device specific SD-OCT retinal layer segmentation using cycle-generative adversarial networks in patients with AMD** [12033-68]

12033 3I **Semi-supervised learning approach for automatic detection of hyperreflective foci in SD-OCT imaging** [12033-69]

12033 3J **Retinal layer segmentation for age-related macular degeneration patients with 3D-UNet** [12033-70]

12033 3K **Synthesis of annotated pathological retinal OCT data with pathology-induced deformations** [12033-71]

**SEGMENTATION**

12033 3L **CVT-Vnet: a convolutional-transformer model for head and neck multi-organ segmentation** [12033-72]

12033 3M **Taking full advantage of uncertainty estimation: an uncertainty-assisted two-stage pipeline for multi-organ segmentation** [12033-73]

12033 3N **Towards a device-independent deep learning approach for the automated segmentation of sonographic fetal brain structures: a multi-center and multi-device validation** [12033-75]

12033 3O **Transformation-consistent semi-supervised learning for prostate CT radiotherapy** [12033-76]

12033 3P **Deep pancreas segmentation through quantification of pancreatic uncertainty on abdominal CT images** [12033-77]

# Conference Committee

*Symposium Chairs*

**Metin N. Gurcan**, Wake Forest Baptist Medical Center (United States)
**Robert M. Nishikawa**, University of Pittsburgh (United States)

*Conference Chairs*

**Karen Drukker**, The University of Chicago (United States)
**Khan M. Iftekharuddin**, Old Dominion University (United States)

*Conference Program Committee*

**Sameer K. Antani**, U.S. National Library of Medicine (United States)
**Samuel G. Armato III**, The University of Chicago (United States)
**Susan M. Astley**, The University of Manchester (United Kingdom)
**Ulas Bagci**, University of Central Florida (United States)
**Esther E. Bron**, Erasmus MC (Netherlands)
**Matthew S. Brown**, University of California, Los Angeles (United States)
**Kenny H. Cha**, U.S. Food and Drug Administration (United States)
**Heang-Ping Chan**, University of Michigan (United States)
**Weijie Chen**, U.S. Food and Drug Administration (United States)
**Thomas M. Deserno**, Technische Universität Braunschweig (Germany)
**Jan Ehrhardt**, Universität zu Lübeck (Germany)
**Catalin Fetita**, Télécom SudParis (France)
**Maryellen L. Giger**, The University of Chicago (United States)
**Hayit Greenspan**, Tel Aviv University (Israel)
**Lubomir M. Hadjiiski**, University of Michigan (United States)
**Horst K. Hahn**, Fraunhofer MEVIS (Germany) and Jacobs Universität Bremen (Germany)
**Takeshi Hara**, Gifu University School of Medicine (Japan)
**Helen Hong**, Seoul Women's University (Korea, Republic of)
**Nico Karssemeijer**, Radboud Universiteit Nijmegen Medical Center (Netherlands)
**JongHyo Kim**, Seoul National University Hospital (Korea, Republic of)
**Despina Kontos**, Penn Medicine (United States)
**Zhengrong Jerome Liang**, Stony Brook University (United States)
**Marius George Linguraru**, Children's National Medical Center (United States)
**Hongbing Lu**, Fourth Military Medical University (China)
**Maciej A. Mazurowski**, Duke University (United States)
**Fabrice Meriaudeau**, Université de Bourgogne (France)
**Kensaku Mori**, Nagoya University (Japan)
**Chisako Muramatsu**, Shiga University (Japan)

**Janne J. Näppi**, Massachusetts General Hospital (United States) and Harvard Medical School (United States)
**Noboru Niki**, University of Tokushima (Japan)
**Carol L. Novak**, Siemens Healthineers (United States)
**Nicholas A. Petrick**, U.S. Food and Drug Administration (United States)
**Prateek Prasanna**, Stony Brook University (United States)
**Letícia Rittner**, Universidade Estadual de Campinas (Brazil)
**Ravi K. Samala**, U.S. Food and Drug Administration (United States)
**Clarisa I. Sánchez**, Universiteit of Amsterdam (Netherlands)
**Ronald M. Summers**, National Institutes of Health (United States)
**Kenji Suzuki**, Tokyo Institute of Technology (Japan)
**Jonas Teuwen**, Netherlands Cancer Institute (Netherlands) and Radboud Universiteit Medical Center (Netherlands)
**Pallavi Tiwari**, Case Western Reserve University (United States)
**Rafael Wiemker**, Philips Research (Germany)
**Axel Wismüller**, University of Rochester Medical Center (United States)
**Shandong Wu**, University of Pittsburgh (United States)
**Xiaofeng Yang**, Emory University (United States)
**Hiroyuki Yoshida**, Massachusetts General Hospital (United States) and Harvard Medical School (United States)
**Chuan Zhou**, University of Michigan Health System (United States)
